

Read what Mr. Paul Isenberg says:

Honolulu, T. H., April 22nd, 1902

Pacific Hardware Co., Ltd., Honelulu, T. H.

Duan Sime: - The presence of the horn-fly pest in my herd of milch cows has been a cause of serious apprehension to me, both on account of the consequent deterioration in the condition of the cattle and the reduced production of milk. I am pleased to inform you that the application of the So-Bos-So Kilfly, which I purchased from you a few days since, has already resulted in a decided improvement in the condition of the cattle, as well as an increase of 20 per cent in the quantity of the milk produced, before the application of the Kilfly. Very truly yours, PAUL R. ISENBERG.

So-Bos-So Kilfly Is a Liquid Mixture

designed to protect cows and horses from torture of flies. The preparation is positively harmless. It is used with splendid results as a disinfectant and germicide. The Electric Sprayer discharges the So-Bos-So (Kilfly) in a fine, broad spray. From 30 to 50 cows can be sprayed in a few moments. The Electric sprayer is detachable, and thus may be thoroughly cleaned.

If your animals are troubled with lice, use So-Bos-So (Kilfly). It knocks them out. Spray your poultry house with So-Bos-So (Kilfly). It kills lice or any vermin that may infect the fewls. Sufferers from the Horn Fly should give Kilfly a trial. We are sole agents for the Territory of Hawaii.

First Reservoir for the Liquid Fuel

WILL BE PLACED ON IWILEI REEF

Iron in the Storage Container.

The bottom and the first ring of the sides of the reservoir which will be the first of the park of storage tankage soon to decorate the reef at Iwilei, have been set up at the local manufactory and the delivery of the plates upon the site will begin shortly. The work of construction will not be long delayed, as the Pacific Oil Company will secure the services of some of the experienced tank builders now in the Is-

lands for the work. The tank will be denominated as of 35,000 barrels capacity, but in reality will hold something like 37,500 barrels when completed. When all the iron and wood work is in place the combined weight will be in the neighborhood of 215,000 pounds. The oil holder will high and will measure 961/2 feet in diameter. It will have as its companions another of exactly the same dimensions and one something like 80 feet in I diameter and 28 feet high, the usual form being departed from owing to the necessity of utilizing a site which will not give the larger diameter.

The first section of the tank now set up is a monster affair as the dimensions in feet and inches do not give the full idea of the magnitude of the cylinder. The bottom is made of 4-inch iron flates that weight being sufficient, as when tested and let down into place the bottom rests upon a solid concrete foundation. There are in the bottom pounds each, which gives forty tons as the weight of that portion of the tank alone. Around the edge, for the rivetting of bottom and side plates together, runs an angle bar which adds several hundredweight to the aggregate.

The first ring of the tank is the heaviest iron which will enter into the conany plates of 7-16-inch in the city it had to be made of 1/2-inch iron, which means that in each of the 27 plates there is 1000 pounds of iron, or an addition of 13 tons to the bottom, making with the angles and the rivets which will have to be put into this section of

to be added to this ground work, the sizes decreasing as the height increases. The next ring above the first, which is of 4-inch, will be %-inch in thickness, the next 5-16, the next 14, and the top 3-16-inch. In these four rings and the nof there will be something above 50 ng to the latest practice the roofs of the tanks are not made of iron as in the former day, as the heavy oil does not make so much gas and there is not the same danger of its diffusion. There are placed on the floor of the tanks two sills, which bear the pillars which uphold the roof, as it is laid at Makiki, Honolulu aforesaid, known

The building of the tanks upon their foundations will be one of the most peuliar tasks which has been underaken here. The tank must be tested is to its floor and first ring, before it s put into place upon its concrete base. To accomplish this the iron must be placed firmly upon an artificial base and then riveted. There must of course be sufficient room for a man to work beneath the bottom, not only in the riveting but also in the caulking and to see to the tightness of the bottom, and the angles once they have been put together. When this has been done the task will come of letting down the tank upon its foundation, the entire mass of tere is no straining, which would rener ineffective the work performed, for fail, as the joints would not stand the

ion within the next two months, entire, and the first one may be ready for the eception of a cargo of the fuel within

SUPREME COURT.

The June Session Was Opened Yesterday Morning.

session of court yesterday morning. In Hilo Railway Co. was presented and submitted. Judge Robinson sat on the court in place of Justice Frear, who was disqualified.

Following the disposition of this case he court heard arguments in the case of Harrison vs. Magoon, which will be continued today. The case of A. A. Montano vs. W. R. Castle was submitted on briefs.

The court ordered that the petition for rehearing in the Kalua Kapukini ase should follow the Harrison vs. Magoon case, and the remaining cases will be taken up in their regular order on the calendar.
